Nationwide coverage

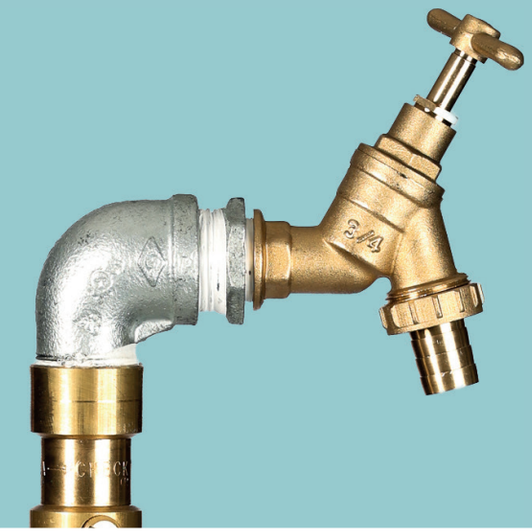

AQUAM works with the majority of the Water Companies across the UK. See our website for further details.

We work in partnership with the water companies to help protect your business by providing a complete standpipe licensed service. From locating and managing authorised standpipes to supplying and delivering legally compliant equipment wherever it is required.

AQUAM is proud to have achieved the following accreditations.

For Office Use:

AQUAM

AMETEK®

Your Licensed Standpipe Provider

Access Water Safely, Legally and Professionally

Unauthorised standpipe use may lead to prosecution

Connecting to the water network using unauthorised equipment is a criminal offence under Article 236(1)&(5) of the Water and Sewerage Services (Northern Ireland) Order 2006 and may result in enforcement action. AQUAM records evidence of unauthorised use of the water network on behalf of NI Water, who may use this evidence to investigate offences and support enforcement proceedings. NI Water also has the authority to prosecute individuals and companies found to be non-compliant.

Unauthorised water use can result in significant fines, legal costs and damage claims.

Protect the water network

Using incorrect or unauthorised standpipes can cause damage to the water network:

- Pipes can crack or become damaged
- Hydrants can be broken
- Mains can burst causing costly repairs

Legal & Authorised standpipes are colour-coded and branded, making it easy to spot unauthorised use.

Risks to water quality and supply

Using unauthorised standpipes can put water quality at risk, potentially resulting in:

- Contamination
- Backflow of dirty water
- Pressure issues and supply interruptions
- Leakage and water loss
- Discolouration of the water supply

Protect Public Health by working within regulatory standards, using our licensed standpipes.

How can AQUAM help?

Provide training to use standpipes safely

Complete the online AQUAM Calm Network Training to understand the correct procedures and level of competence required when operating valves and using standpipes on the water network. Proper training helps minimise the risk of damage, contamination and supply disruption.

Some water regions require this training to be done before a standpipe can be used on their network.

Find hydrants quickly using our app

Our Hydrant Finder App is available on Android and Apple devices, or you can access it directly from your desktop via a web browser.

Ideal for:

- Surveyors pricing and planning work
- Office teams issuing work notifications
- Site operatives and contractors

Use your CALM Network certification number to download the FREE AQUAM Hydrant Finder App and quickly locate authorised hydrants.
