

About NI Water

It costs around £460m each year to deliver water services in Northern Ireland. Thousands of assets at a value of around £3bn, are operated and maintained to provide these services. This includes over 40,000km of water mains and sewers - one and a half times longer than Northern Ireland's entire road network and long enough to circle planet earth.

Delivering your drinking water

24

Impounding reservoirs

We collect water from the environment

23

Water treatment works

We clean the water, making it safe to drink

370

Service reservoirs

We store the drinking water in service reservoirs

345

Pumping stations

We use pumping stations to get the drinking water to our customers

875,000 Households and businesses

Our customers rely on the services we provide

27,000km of water mains

575m Litres per day

710k

Households and businesses

We collect used water from our customers

1,300

Pumping stations

We use pumping stations to get the used water to our treatment works

1,030

Used water treatment works

We treat used water and return it safely to the environment

64

Sludge management centres

Sludge is de-watered before being incinerated

16,000km of sewers

340m Litres per day

Recycling your used water
